Next Generation Balloon Pleat & Fold Equipment from Machine Solutions Inc. Increases Throughput with Dual In-Line Processing

Flagstaff, AZ USA, July, 2009 - Machine Solutions Inc.-

Machine Solutions Inc. (MSI) is pleased to announce the launch of its new FFS760S Balloon Pleating and Folding Equipment. The FFS760S offers increased throughput and operator efficiency with the use of dual in-line Wavepleat™ and fold heads. This machine allows for processing on one set of heads while the other set is being loaded, effectively allowing a single operator to simultaneously control two machines.

“MSI’s continued commitment to advanced automation and process engineering for the medical device industry is highlighted in our latest introduction for pleating and folding angioplasty balloon catheters and stent delivery systems. This new product release is the result of several years of development combined with the most effective technique for processing a wide range of balloon materials,” says Daniel Kasprzyk, CEO of Machine Solutions Inc.

The FFS760S is PAC controlled with PC/HMI touch screen user interface for easy process development and quick product changeover. The FFS760S includes an integrated vision system which eliminates manual positioning variability and associated yield loss by automatically positioning balloons into the pleat/fold heads. Additional features include dual automated top loading v-blocks with removable Press-Sure™ catheter sealing devices, optional bar code scanning and servo motor activation.

About Machine Solutions Inc.

Machine Solutions Inc. (MSI) was founded with the mission of providing innovative and effective proprietary mechanical solutions to a variety of complex process and device design challenges. MSI has been instrumental in automating manual processes within catheter and stent manufacturing operations and within the device industry. Please visit www.machinesolutions.com for additional corporate and product information.
